ANSOFT CORPORATION

# Course Objectives

- ◆ Learn how to use Ansoft Designer for RF, DSP, and mixed RF/DSP system design.
- ◆ Learn how Ansoft Designer performs frequency and time domain analysis at the system level and how to use each to your advantage.
- ◆ Learn how to include Circuit simulation, Electromagnetic simulation, and Measured data in system analysis.

# Contents

- ◆ **Introduction**
- ◆ Ansoft Designer Interface Overview
- ◆ Frequency vs Time Domain
- ◆ **Frequency Domain Analysis**
  - ◆ Design Setup
  - ◆ Analysis Types
  - ◆ Transmitter Example
  - ◆ Receiver/Transceiver Exercises
- ◆ Hierarchy and Co-Simulation
  - ◆ System, Circuit & EM
  - ◆ Topology Restrictions
  - ◆ Parameterization
  - ◆ Balanced Amplifier Example
  - ◆ Channelizer Exercise
- ◆ Measured/External Data Use
  - ◆ File types and dependencies
  - ◆ Measured Transmitter Example
  - ◆ Measured Receiver Exercise
- ◆ Time Domain Setup
  - ◆ Sources and Probes
  - ◆ Source Example
  - ◆ Oscillator Exercise
- ◆ **Time Domain Analysis**
  - ◆ Carrier and Envelope
  - ◆ Amplitude Modulation Example
  - ◆ MPSK/Chirp Exercises
- ◆ Linear Mixed Mode
  - ◆ Linear interfaces
  - ◆ Convolution & Impulse Invariance
  - ◆ Impulse Example
  - ◆ MPSK Mixed Mode Exercise
- ◆ Nonlinear Mixed Mode
  - ◆ Nonlinear interfaces
  - ◆ Swept Time Analysis
  - ◆ BER Exercise
- ◆ **Conclusions**
